

00. The High-Ticket AI Agency

You are not selling "AI Web Development." Clients don't care about the tools you use; they care about business outcomes. Sell the result: "I build booking systems that never double-book," or "I build client portals that reduce customer support calls by 50%."

High-Ticket Niche Examples:

Real Estate: "I build custom CRM dashboards for brokers to track leads." (Value: \$3k - \$8k)

Healthcare: "I build secure, HIPAA-compliant patient intake forms and portals." (Value: \$5k - \$12k)

E-Commerce: "I build headless storefronts that load in under 1 second." (Value: \$4k - \$10k)

VOLUME III

The AI-Native Freelance Business

Research → Qualify → Propose → Build → Deliver → Retain.

01. Prospect Research & Audits

Do not let AI invent metrics. Feed it facts you manually gather (e.g., from Google Maps, broken links on their site, or poor mobile rendering) and let it generate a factual analysis.

AIWEBDEV PROMPT 3.01

THE FACTUAL WEBSITE AUDIT

USE WHEN

Evaluating a prospect's current website.

CONTEXT TO ATTACH

Screenshots, manual notes, competitor URLs

RUN INSIDE

Antigravity Agent or standard chat UI

RECOMMENDED ROLE

Strong reasoning model

DO NOT ATTACH

Fabricated SEO scores

NEXT

Prompt 3.02 Outreach Message

Act as a website conversion and technical audit assistant. I am evaluating a potential freelance prospect.

IMPORTANT: Do not invent statistics, PageSpeed scores, traffic numbers, conversion rates, rankings or business information. Only make factual claims supported by information I provide or evidence we actually inspect.

PROSPECT: [Business Name]

WEBSITE: [URL]

BUSINESS TYPE: [Type]

LOCATION: [Location]

MY OBSERVATIONS: [Paste your manual observations here]

Analyse the available evidence across:

1. First impression & visual consistency
2. Mobile usability
3. Navigation & Calls-to-action
4. Obvious technical problems

Separate findings into: CONFIRMED OBSERVATIONS, POTENTIAL OPPORTUNITIES, THINGS THAT REQUIRE VERIFICATION. Identify the 3 strongest legitimate reasons I could contact this business.

02. AI-Assisted Outreach

Cold outreach fails because it sounds like AI. Force the model to sound human, direct, and focused strictly on the facts from your audit.

AIWEBDEV PROMPT 3.02

COLD EMAIL / LINKEDIN DM

USE WHEN

Generating the initial contact message.

CONTEXT TO ATTACH

@audit-results

RUN INSIDE

Antigravity Agent or standard chat UI

RECOMMENDED ROLE

Fast model

DO NOT ATTACH

Marketing jargon, buzzwords

NEXT

Send message, set CRM reminder

Draft a cold outreach message based on the Factual Audit results.

Requirements:

- Target: The business owner or manager.
- Platform: [Email / LinkedIn / WhatsApp].
- Tone: Direct, respectful, zero marketing jargon. Do NOT use words like "synergy," "skyrocket," or "unlock."
- Structure:
 1. Quick, personalized hook based on the audit.
 2. Point out ONE specific, factual problem (e.g., broken mobile booking).
 3. Offer a very low-friction next step (e.g., a 5-minute loom video, or a quick question).

Keep it under 4 sentences. The goal is a reply, not a sale.

03. Discovery Calls & Scope

After a successful call, you have a messy page of notes. AI is incredible at turning messy human thoughts into professional project scopes.

AIWEBDEV PROMPT 3.03

DISCOVERY NOTE ANALYSIS

USE WHEN

Post-call processing.

CONTEXT TO ATTACH

Rough call notes, prospect budget hints

RUN INSIDE

Strong reasoning model

DO NOT ATTACH

Technical implementation details

NEXT

Prompt 3.04 Proposal Draft

Act as a senior project manager. I just had a discovery call with a prospect.

Here are my raw, unedited notes:
[PASTE NOTES]

Please analyse these notes and extract:

1. The Core Business Goal (Why do they want this now?)
2. Required Features (Must-haves vs Nice-to-haves)
3. Pain points with their current solution.
4. Missing Information (What questions do I still need to ask them?)
5. Red Flags (Are there any scope-creep risks based on what they said?)

Format this as a clean internal brief for me.

AIWEBDEV PROMPT 3.04

THE CLIENT PROPOSAL

USE WHEN

Sending the official quote.

CONTEXT TO ATTACH

@internal-brief

RUN INSIDE

Antigravity Agent or standard chat UI

RECOMMENDED ROLE

Strong reasoning model

DO NOT ATTACH

None

NEXT

Wait for client signature

Turn the internal brief into a professional client proposal.

Include:

- Executive Summary (Their goals).
- Scope of Work (Deliverables: e.g., 5-page site, Supabase Auth, Admin Dashboard).
- Exclusions (What is NOT included, very important).
- Timeline estimates.
- Investment (I will charge \$XXXX for this).

Keep the language professional but highly accessible. Do not use overly technical jargon. Explain features in terms of business value.

03.5 AI Project Management

Once the client signs, scope creep is your worst enemy. Use AI to generate strict milestone trackers and client update emails that keep everyone aligned.

AIWEBDEV PROMPT 3.04b

WEEKLY CLIENT UPDATE EMAIL

COPY THIS INTO ANTIGRAVITY:

Draft a weekly update email for my client.

Project: [Project Name]

What I did this week: [Bullet points of tasks completed]

What I am doing next week: [Bullet points of upcoming tasks]

Blockers: [Anything I need from the client]

Keep it professional, concise, and reassuring. Do not use technical jargon. Emphasize that the project is on track.

04. Delivery, Handover & Retainers

The project isn't over when the code is written. A professional handover is what turns a one-off client into a recurring retainer.

AIWEBDEV PROMPT 3.05

PRE-DELIVERY QA & HANDOFF

USE WHEN

Final polish before sending to client.

CONTEXT TO ATTACH

@project-scope @final-repo

RUN INSIDE

Antigravity Agent or standard chat UI

RECOMMENDED ROLE

Fast model

DO NOT ATTACH

None

NEXT

Prompt 3.06 Upsell Maintenance

I am about to hand over the completed web application to the client.

First, cross-reference the original Scope of Work with the current codebase. Are there any promised features missing?

Second, draft a 'Handover Email' for the client.

It should include:

- A link to the live production site.
- Instructions on how to log in to the admin dashboard.
- A request for them to review the site by [Date].
- A polite note that any requested changes beyond the original scope will be quoted separately.

AIWEBDEV PROMPT 3.05b

LOOM TRAINING SCRIPT GENERATOR

COPY THIS INTO ANTIGRAVITY:

I am recording a 5-minute Loom video to train the client on their new dashboard.
Please write a short script/outline for me to follow.

Features to cover:

1. How to log in securely.
2. How to view new leads.
3. How to update the content.

Structure the script to be encouraging and clear. Remind them at the end that they can reach out for a retainer if they need ongoing help.

05. Selling the Retainer

Web applications require maintenance. Uptime monitoring, dependency updates, and minor feature tweaks. Offer this as a monthly recurring revenue (MRR) package.

AIWEBDEV PROMPT 3.06

RETAINER UPSELL PITCH

COPY THIS INTO ANTIGRAVITY:

Draft an email pitching a monthly maintenance retainer to a client whose project I just completed.

The retainer includes:

- 24/7 Uptime monitoring (via Vercel/Render)
- Monthly security dependency updates
- Up to 2 hours of minor UI tweaks per month
- Priority email support

Frame this as "insurance for their new investment" rather than a technical maintenance plan. Offer it at [Price]/month.
